

Central Administrator Console 3.1.5 Software Release Notes

Introduction

The Central Administrator Console (CAC) software version 3.1.5 benefits network administrators in regulated environments where managing large groups of people, projects, and workstations can be costly and time-consuming. The CAC software can help any administrator manage resources more effectively by providing the option of managing users, roles, and projects centrally.

The CAC software is license-enabled and can be installed on any workstation that supports SCIEX OS version 3.0 and Windows Server 2019.

The CAC software and SCIEX OS (acquisition or processing) cannot be installed on the same workstation.

Note: The CAC software uses TCP ports 63333 and 44144 for communication. The server must allow inbound and outbound traffic on these ports.

Note: New permissions have been added to the Administrator role for accessing the CAC software features. The user can create customized roles for accessing and administering the CAC software.

Note: The CAC software does not support the Analyst software.

New in Version 3.1.5

This section describes the enhancements and fixes in the Central Administrator Console (CAC) software version 3.1.5. To view the enhancements and fixes for a previous release of the Central Administrator Console (CAC) software, refer to the document: *Release Notes* that came with that version of the software.

Features and Enhancements in Version 3.1.5

The following events can now be audited:

- **CAC audit trail:** The following CAC software events:
 - **User added/deleted**
 - **User role added**
 - **User role deleted**
 - **User role modified**

Notes on Use and Known Issues

Notes on Use

Regulated customers: We recommend that, if user management settings are imported after software validation, then customers follow their internal change control process to document the configuration changes.

- The Central Administrator Console (CAC) software is compatible with SCIEX OS version 3.0 or later.
- The CAC software only supports SCIEX OS. The Analyst Administrator Console (AAC) is used to manage the Analyst software settings.
- The CAC software can be installed on same computer as the Flexnet Server.
- The CAC software supports cross-domain users. All users do not have to be in same Active Directory domain.

Known Issues

- The workstation report does not have the workstation **Status** and last **Status Update Time**. (ONYX-24475)
